

How [exactly] do I get tested for STIs?

- **HIV** = blood draw
- **Syphilis** = blood draw
- **Hepatitis C** = blood draw
- **Gonorrhea / chlamydia** = swab or urine (must not have urinated in the past 60-minutes before specimen collection)
- **HPV (low-risk, genital warts)** = visual inspection by a healthcare provider
- **HPV (high-risk)** = pap smear
- **Herpes** = swab from lesion (preferred) or blood draw
